1. When you are creating a timetable for your students at home, it's best to have them all working on different activities in a rotation. Why?... to keep them out of each other's space! Trust me, it will help.
2. Have ONE activity that might need you to work with ONE child and the others are working on a different activity. You can't be everywhere and it's very tiring trying to have all students at one table at the same time!

For Example:

1. English - working with parent on Spelling
2. PE - working on iPad with earphones doing a Fitness Hub workout
3. Maths - working on Cool Maths Games
